

P Fashionable taste -flawless construction
PEDICURE SPA CHAIR

Comfort / elegance / functionality / simplicity / professionalism

C haracteristics of the tub

FRP twin color tub with tapered-in base allows the technician's feet to move forward and increase the level of comfort for the feet.

The tub surface is manufactured from marine grade FRP to resist corrosion by acetone and solvents. The scratch and impact resistance is higher than acrylic tubs and easier to maintain.

Large footrest design can withstand 100kg of pressure without deforming, making it rock steady.

Passed 72-hr acetone test

Two-way showerhead, the showerhead can be pulled up for washing or for filling the tub with water.

Energy-efficient pipe-less spa pump automatically detects water level and cuts off power to avoid the pump from burning out.

High brightness LED spa lights.

The drain switch equipped with overflow is positioned beneath the seat to prevent clients from accidentally activating the drainage switch when putting their feet in the tub.

Electronic control switch controls the on/ off/ timer of the spa pump and drainage pump.

The drainage pump can be switched off using the timer; it can also be activated/ switched off manually.

The pedicure technician can operate the controls easily even if she has long nails. The buttons feature delayed activation, and the user needs to press and hold the button for at least 3 seconds to activate a function. When powering off the unit, simply press and hold the button for 3 seconds. The delayed activation feature avoids accidental activation of the equipment.

C haracteristics of the chair

Rail-type massage mechanism is suitable for prolonged operation and minimizes wear and malfunction.

Intuitive handheld control is designed exclusively for pedicure salons. The simplified button operation ensures maximum convenience for the client.

Armrest with piano lacquer finish.

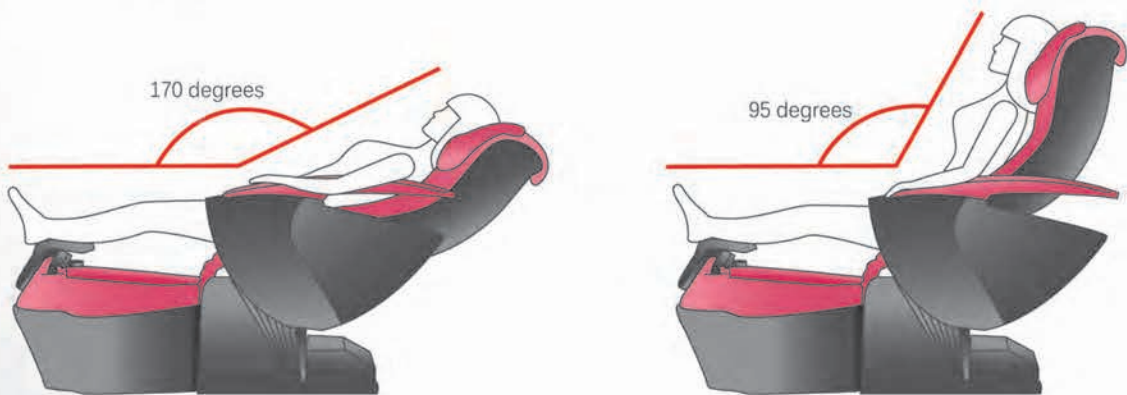

The motherboard and control unit are located behind and below the seat to facilitate maintenance and replacement.

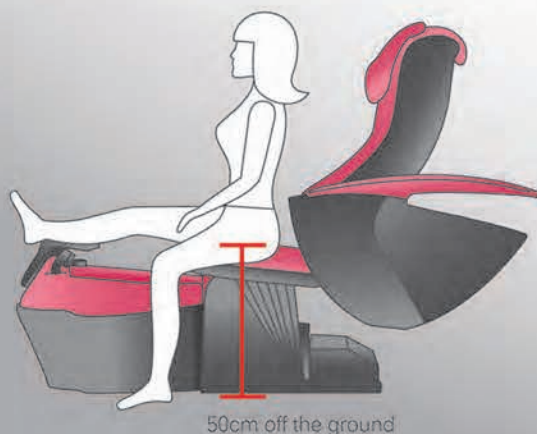

Industry first flexibility rest™

The seating posture can be adjusted forwards and backwards by 30cm, and the footrest height can be adjusted by 12cm. Clients with heights between 150cm and 180cm can find the most comfortable position to enjoy pedicure. (Illustration: Height ratio with feet on the footrest; 10cm of adjustment range for the footrest, clients with different physiques can find a comfortable position to enjoy foot massage).

The seatback can recline with an angle range of 95~170 degrees. The almost completely flat angle allows the client to fully rest while enjoying services such as head massage and facial care etc.

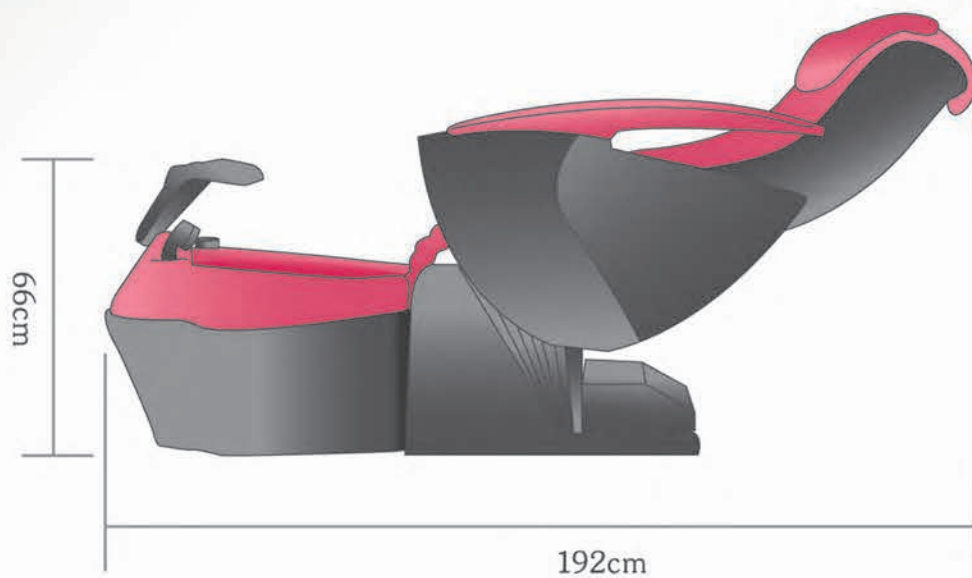

When adjusting the seat forward, the seat will lower to a height of 50cm from the ground. By pushing back the armrest, the client can sit onto the sofa from a standing position to avoid the danger of the traditional approach, where the customer stands into the tub first before turning and sitting onto the sofa.

A **foot massage** is more than just massaging the feet

The Pedicure Spa Chair allows the body to find the most comfortable position to enjoy a foot massage.
